

# *SLAM technologies for parking applications part II: A showcase AdaptIVe*

Dr. Markus Hahn

Principal Engineer, Daimler AG

Mercedes-Benz

The best or nothing.

**AdaptIVe**  
Automated Driving

# Demonstrator and Sensors

# Approaches

- Mapping based on dead reckoning
- Mapping based on dead reckoning + radar odometry
- Scan matching
- Scan matching + radar odometry
- EKF SLAM
- Fast-SLAM
- Grid-based SLAM
- Graph-SLAM

# Approaches

# Approaches

# Teaching an Environment

# Radar grid of Environment

# Localisation

# Evaluation of Localisation

- Tachymeter Leica MS50 as ground truth system
- Prisms are placed on car
- 16 environment sets
- 5 trajectories per environment set
- Environment set was changed during the drives:
  - Parked cars
  - Pedestrians
  - Garbage cans
- Cross validation with all trajectories of environment set

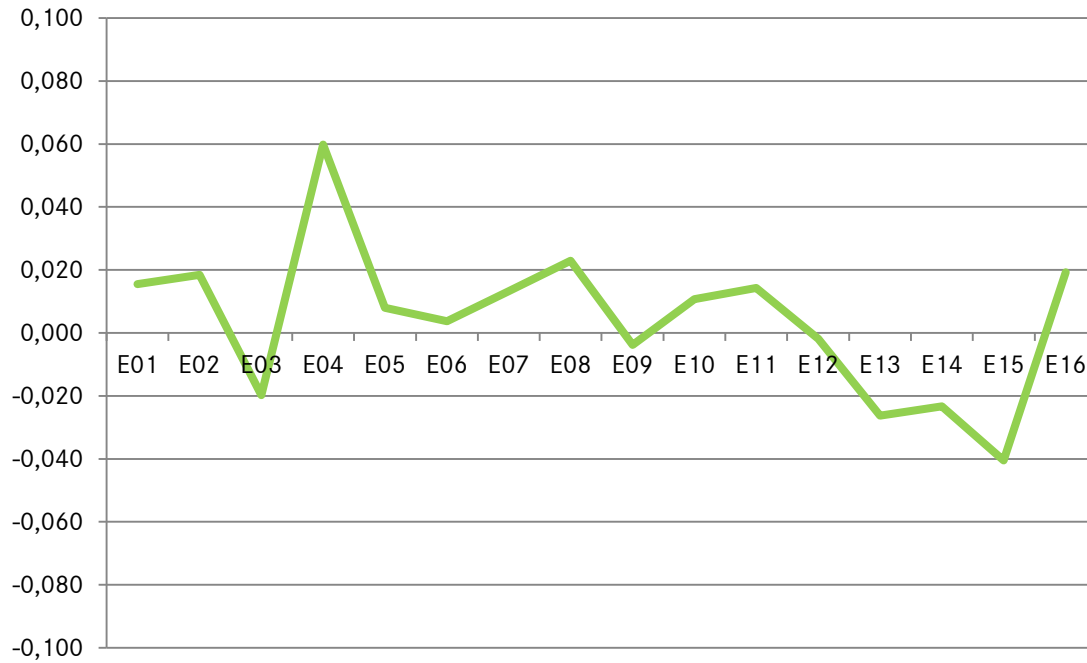

# Localisation: Current Results

Error in lateral direction along whole trajectory, around 400 drives

Median lateral error in m

IRQ/2 lateral error in m

IQR → interquartile range, measure of statistical dispersion, being equal to the difference between the upper and lower quartiles

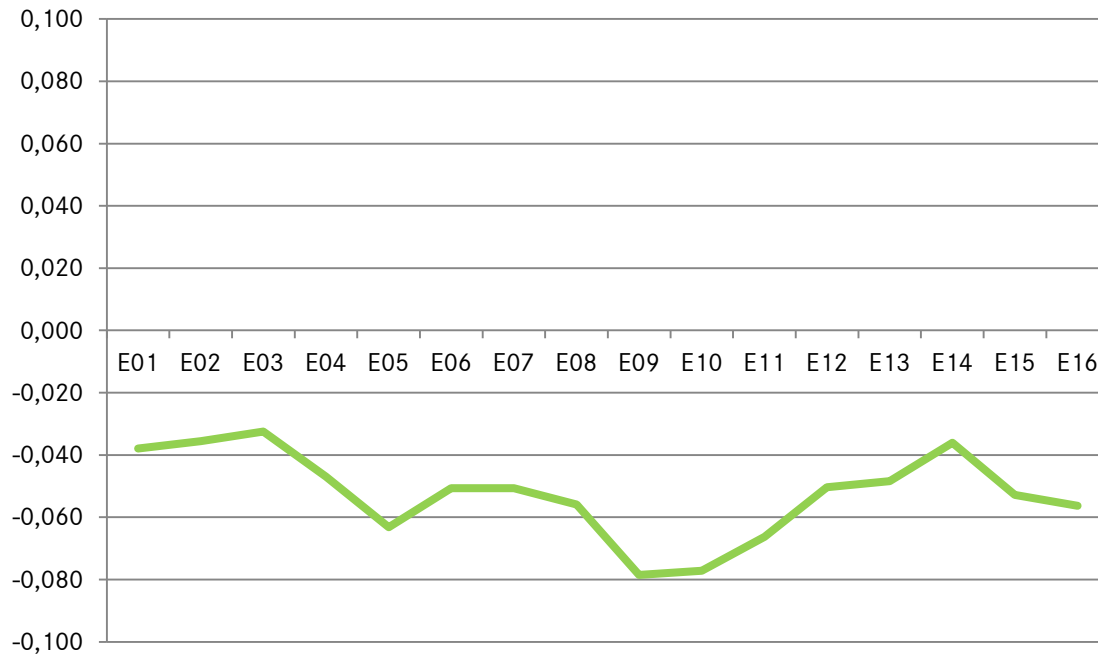

# Localisation: Current Results

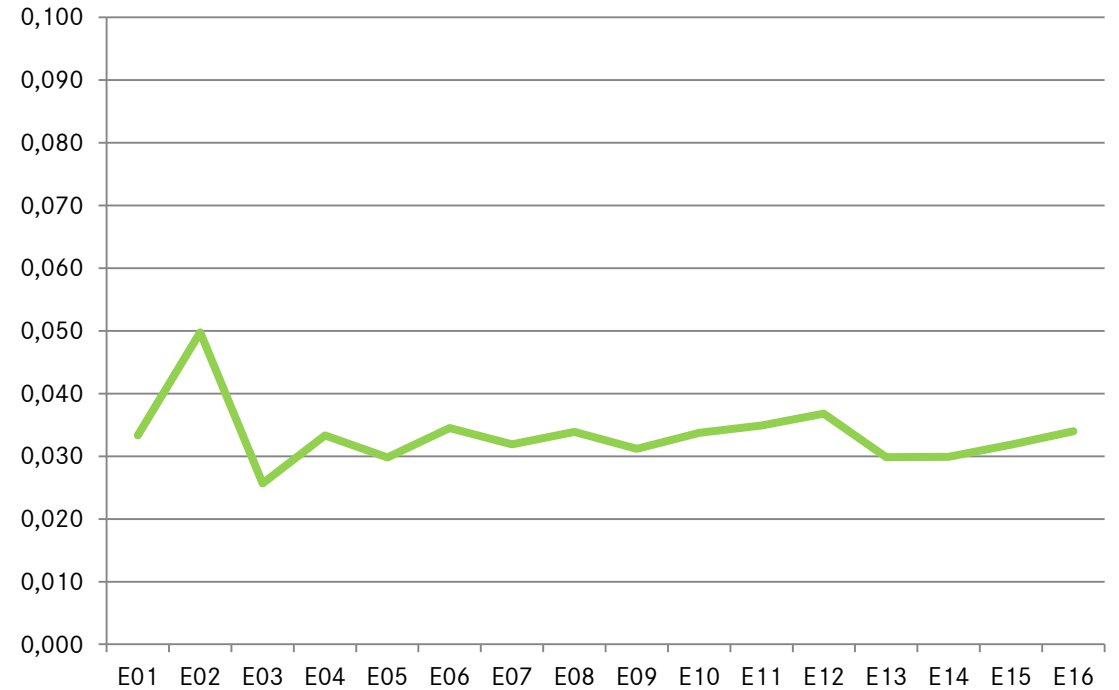

Error in longitudinal direction along whole trajectory

Median longitudinal error in m

IRQ/2 longitudinal error in m

IQR → interquartile range, measure of statistical dispersion, being equal to the difference between the upper and lower quartiles
